

Preprocessed Document

Grayscale Image and Corresponding Text Mask

Candidate Patch Sampling

Randomly Sample 100 Candidate Regions
Candidate Size: 224×224 Pixels

Candidate Evaluation

Compute Texture Standard Deviation $\sigma(P)$
and Text Ratio R_{text}

Texture Threshold

Discard Candidate if $\sigma(P) < 8$

Candidate Score

$$S(P) = \sigma(P) - 50R_{\text{text}}$$

Best Candidate Selection

Retain the Candidate
with the Highest Score

Repeat Patch Selection

Execute the Selection Procedure 8 Times per Document

Final Texture Patches

8 Selected Patches, Each 224×224 Pixels
